**DETAILED ACTION**

***Drawings***

1. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on April 30, 2003 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent Document No. 9-254821 to Kato.

Kato discloses a pedal bracket structure comprising a bracket 22, a toe board 20, a lever 18, a pivot 28, a rigidity supplementing portion 26-2 formed in the front end portion of the bracket, and a brittle portion 26-2a formed at a rear side of said rigidity supplementing portion. The brittle portion is formed ahead of the pivot in a longitudinal direction of said bracket. The bracket has a rigidity increasing member between the pivot and a mounting portion 40 at the rear of the bracket, including a saddle-shaped switch bracket 32 fastened to the bracket; and a rigidity supplementing bracket 32 disposed between the saddle-shaped switch bracket and said mounting portion, wherein the rigidity supplementing bracket is aligned with and fixed to said saddle type

switch bracket. The rigidity supplementing portion is formed to be swollen outwardly forming a swollen bead or curved rib, and the brittle portion has a semi-circular shaped hole or slit and a thin portion formed therein after impact, as seen in Figure 13. The rigidity supplementing portion and the brittle portion are contiguous.

### ***Response to Arguments***

4. Applicant's arguments filed April 30, 2003 have been fully considered but they are not persuasive. Applicant argues that Kato lacks a rigidity supplementing portion with a brittle portion at a rear side thereof. For purposes of clarification, the beam of material that constitutes the vertical leg of the triangle in Figure 11 is a rigidity supplementing portion as broadly claimed. The opening is at a rear of this beam and is a brittle portion as broadly claimed.

### ***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3682

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
